PUBLIC HEALTH FUNDING  Strong investments in public health allow a state to carry out programs that improve health. Minnesota receives $133 total per person from the Centers for Disease Control and Prevention (CDC) and the Health Resources Services Administration (HRSA) in public health funding. In 2021, the Prevention and Public Health Fund awarded the state over $10.66 million in grants for community and clinical prevention efforts and improvements to public health infrastructure.

ACCESS TO CARE  4.5 percent of people in Minnesota do not have health insurance coverage, well below the national uninsured rate of 8.6 percent. The number of practicing primary care providers is also an important measure of health care availability. Minnesota has 318.5 active primary care providers per 100,000 people, which is above the national average of 265.3 practicing primary care providers per 100,000 people.

Notable Health Measures

- **Drug deaths**  While the drug death rate is lower in Minnesota compared to the national rate of 27.9 deaths per 100,000 people, drug deaths have increased considerably over the past ten years. The number of deaths due to drug injury climbed from 5.0 deaths per 100,000 people in 2007 to 18.9 deaths per 100,000 people in 2022.

- **Physical inactivity**  20.29 percent of the adult population reports doing no physical activity in the past 30 days, which is low in comparison to the national rate of 23.7 percent.

The Challenges Ahead

- **High school graduation**  83.7 percent of students in Minnesota graduate from high school, which is below the national average of 85.8 percent. This is of public health concern as there is a strong connection between education and health. People with higher levels of education are more likely to adopt healthy behaviors.

- **Excessive drinking**  19.4 percent of the adult population reports excessively drinking, ranking the state 10th highest in the nation. Excessive alcohol use can lead to fetal damage, liver diseases, high blood pressure, cardiovascular diseases and other major health problems.
