

THE FACTS COLORADO

Speak
for **Health**

AN INITIATIVE OF THE
AMERICAN PUBLIC HEALTH ASSOCIATION

PUBLIC HEALTH FUNDING Strong investments in public health allow a state to carry out programs that improve health. Colorado receives \$187 per person in funding from the Centers for Disease Control and Prevention (CDC) and the Health Resources Services Administration (HRSA), ranking the state 26th in the country. In fiscal year 2023, the Prevention and Public Health Fund awarded \$6.67 million in grants to Colorado for community and clinical prevention efforts and improvements to public health infrastructure.

ACCESS TO CARE 7.1 percent of people in Colorado do not have health insurance coverage compared to the national uninsured rate of 8.0 percent. The number of practicing primary care providers is also an important measure of health care availability. Colorado has 245.4 active primary care providers per 100,000 people in comparison to 232.0 practicing primary care providers per 100,000 people nationally.

Notable Health Measures

- **Obesity and physical activity** Colorado has the lowest obesity rate in the nation, with only 25.0% of adults in the state obese. The state also holds the lowest rate of physical inactivity among adults with 16.8 percent of adults physically inactive.
- **Mental distress** Colorado ranks 25th in the nation for rates of mental distress, with 15.9% of adults reporting that their mental health was not good on 14 or more days within the past 30 days.
- **Chlamydia** The number of new cases of chlamydia per 100,000 people has been steadily increasing since 2015 when there were about 393 reported cases. In 2023, the state reported 460.2 cases.

The Challenges Ahead

- **High school graduation** 81.9 percent of students graduate high school in Colorado, ranking the state the 5th lowest in the nation. This is of public health concern as there is a strong connection between education and health. People with higher levels of education are more likely to adopt healthy behaviors. The health benefits of educational attainment accumulate and as a result will also impact the community level and social/cultural context.
- **Low birthweight** 9.5% of infants born in Colorado weigh less than 5 lbs, 8 oz, ranking the state 8th highest in the nation for rates of low birthweight.
