**PUBLIC HEALTH FUNDING**  Strong investments in public health allow a state to carry out programs that improve health. Wyoming receives $112 total per person from the Centers for Disease Control and Prevention (CDC) and the Health Resources Services Administration (HRSA) in public health funding. The Prevention and Public Health Fund awarded the state $1.94 million in grants for community and clinical prevention efforts and improvements to public health infrastructure in fiscal year 2018.

**ACCESS TO CARE**  11.4 percent of people in Wyoming do not have health insurance coverage, well above the national uninsured rate of 8.8 percent. The number of practicing primary care physicians is also an important measure of health care availability. Wyoming has 111.0 active primary care physicians per 100,000 people, well below the national average of 159.6 practicing primary care physicians per 100,000 people.

**Notable Health Measures**

- **Drug deaths**  In the past four years, drug deaths decreased 6.7 percent from 16.4 deaths per 100,000 people in 2015 to 15.3 deaths per 100,000 people in 2019.

- **Air pollution**  The state has the 3rd best air quality in the nation with an estimated 5.0 micrograms of fine particles per cubic meter, well below the national average of 8.4 micrograms of fine particles per cubic meter. Reduced exposure to air pollution is important to public health as poor air quality leads to reduced lung function, increased risk of asthma complications, heart attacks, heart failure and death, and impacts a large number of people, particularly impacting young children and older adults.

**The Challenges Ahead**

- **High school graduation**  86.2 percent of students graduate from high school in Wyoming, ranking the state 25th in the nation. Graduation rates are a public health concern as there is a strong connection between education and health. People with higher levels of education are more likely to adopt healthy behaviors.

- **Tobacco use**  18.8 percent of the adult population in Wyoming smokes cigarettes. Each year, 800 adults die from smoking-related illnesses in Wyoming and $258 million is spent on health care costs due to smoking.

- **Occupational fatalities**  The state has the highest rate of occupational fatalities in the nation with 10.9 deaths per 100,000 workers.

- **Low birthweight**  8.7 percent of live births in Wyoming are low birthweight, ranking the state 31st in the nation. Low birthweight is associated with short- and long-term complications and an increased risk of infant mortality.
